

```
boost::statechart::  
event< EvWaypoint201  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined with the text 'boost::statechart::event< EvWaypoint201 < TSource, TObjectTag > >' in its top section, with two empty sections below. The derived class is defined with the text 'cl\_move\_base\_z::EvWaypoint201 < TSource, TObjectTag >' in its top section, '+ waypointIndex' in its middle section, and an empty section at the bottom. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

```
cl_move_base_z::EvWaypoint201  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
