

```
boost::statechart::  
event< EvWaypoint118  
< TSource, TObjectTag > >
```

The diagram shows a vertical inheritance relationship. A blue arrow points from the bottom class to the top class. The top class is a template event type from boost::statechart. The bottom class is a concrete implementation from cl_move_base_z, which inherits from the base event type. The bottom class has a public attribute named waypointIndex.

```
cl_move_base_z::EvWaypoint118  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
