

boost::statechart::  
event< EvEStop >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvEStop >"]
    class sm_packML_EvEStop["sm_packML::EvEStop"]
    boost_statechart_event <|-- sm_packML_EvEStop
```

The diagram illustrates an inheritance relationship between two C++ classes. The base class, `boost::statechart::event< EvEStop >`, is represented by a white box with a black border and is divided into three horizontal sections. The top section contains the class name, while the two lower sections are empty. The derived class, `sm_packML::EvEStop`, is represented by a gray box with a black border and is also divided into three horizontal sections. The top section contains the class name, while the two lower sections are empty. A blue arrow with a hollow triangular head points from the top of the `sm_packML::EvEStop` box to the bottom of the `boost::statechart::event< EvEStop >` box, indicating that `sm_packML::EvEStop` inherits from `boost::statechart::event< EvEStop >`.

sm\_packML::EvEStop
