

boost::statechart::
event< EvWaypoint108
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint108< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint108["cl_move_base_z::EvWaypoint108< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint108 --|> boost_statechart_event
```

The diagram shows a class hierarchy. The base class, 'boost::statechart::event< EvWaypoint108 < TSource, TOrthogonal > >', is represented by a white box with a thin grey border. It has two empty rectangular compartments below the header. The derived class, 'cl_move_base_z::EvWaypoint108 < TSource, TOrthogonal >', is represented by a grey box with a thick black border. It has three compartments: the first contains the class name, the second contains the public attribute '+ waypointIndex', and the third is empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint108
< TSource, TOrthogonal >

+ waypointIndex
