

boost::statechart::  
event< EvWaypoint170  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint170< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint170< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. A base class box at the top contains the text 'boost::statechart::event< EvWaypoint170 < TSource, TOrthogonal > >'. A derived class box at the bottom, shaded gray, contains 'cl\_move\_base\_z::EvWaypoint170 < TSource, TOrthogonal >' and a public attribute '+ waypointIndex'. A blue arrow with an open triangular head points from the derived class to the base class.

cl\_move\_base\_z::EvWaypoint170  
< TSource, TOrthogonal >

+ waypointIndex
