

```
boost::statechart::  
event< EvWaypoint182  
< TSource, TObjectTag > >
```

The diagram shows two class boxes. The top box is white and represents the base class `boost::statechart::event< EvWaypoint182 < TSource, TObjectTag > >`. It has two empty compartments below the first. The bottom box is gray and represents the derived class `cl_move_base_z::EvWaypoint182 < TSource, TObjectTag >`. It has a third compartment containing the attribute `+ waypointIndex`. A blue arrow with an open triangular head points from the bottom box to the top box, indicating inheritance.

```
cl_move_base_z::EvWaypoint182  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
