

```
boost::statechart::  
event< MoveGroupMotionExecution  
Succeeded< TSource, TObjectTag > >
```

The diagram illustrates an inheritance relationship between two C++ event types. A blue arrow points from the 'moveit_z_client::MoveGroupMotionExecutionSucceeded' class to the 'boost::statechart::event' class, indicating that the former inherits from the latter. Both classes are represented as rectangular boxes divided into three horizontal sections. The top section contains the class name and its template parameters. The bottom two sections are currently empty.

```
moveit_z_client::MoveGroup  
MotionExecutionSucceeded  
< TSource, TObjectTag >
```
