

boost::statechart::  
event< EvWaypoint110  
< TSource, TOrthogonal > >

```
classDiagram
    class BoostStatechartEvent["boost::statechart::event< EvWaypoint110 < TSource, TOrthogonal > >"]
    class ClMoveBaseZEvent["cl_move_base_z::EvWaypoint110 < TSource, TOrthogonal >"]
    ClMoveBaseZEvent --|> BoostStatechartEvent
```

The diagram illustrates a generalization relationship between two event types. The base class, located at the top, is `boost::statechart::event< EvWaypoint110 < TSource, TOrthogonal > >`. It is represented by a white box with a thin grey border, divided into three horizontal sections. The top section contains the text, while the bottom two sections are empty. The derived class, located at the bottom, is `cl_move_base_z::EvWaypoint110 < TSource, TOrthogonal >`. It is represented by a grey box with a thick black border, also divided into three horizontal sections. The top section contains the text, the middle section contains `+ waypointIndex`, and the bottom section is empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

cl\_move\_base\_z::EvWaypoint110  
< TSource, TOrthogonal >

+ waypointIndex
