

boost::statechart::
event< EvWaypoint152
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint152< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint152["cl_move_base_z::EvWaypoint152< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint152 --|> boost_statechart_event
```

The diagram shows a UML class hierarchy. At the top is the base class `boost::statechart::event< EvWaypoint152 < TSource, TOrthogonal > >`, represented by a white box with a thin grey border. Below it is the derived class `cl_move_base_z::EvWaypoint152 < TSource, TOrthogonal >`, represented by a grey box with a thick black border. A blue arrow with an open triangular head points from the derived class to the base class, indicating inheritance. The derived class box is divided into three horizontal sections: the top section contains the class name, the middle section contains the public attribute `+ waypointIndex`, and the bottom section is empty.

cl_move_base_z::EvWaypoint152
< TSource, TOrthogonal >

+ waypointIndex
