

```
boost::statechart::  
event< EvWaypoint163  
< TSource, TOrthogonal > >
```

The diagram shows a class hierarchy. At the top is a white box representing the base class `boost::statechart::event< EvWaypoint163 < TSource, TOrthogonal > >`. It has two empty rectangular compartments below the header. Below this box is a blue arrow pointing upwards, indicating inheritance. At the bottom is a grey box representing the derived class `cl_move_base_z::EvWaypoint163 < TSource, TOrthogonal >`. It has a header compartment with the class name, a compartment below it containing the attribute `+ waypointIndex`, and a final empty compartment at the bottom.

```
cl_move_base_z::EvWaypoint163  
  < TSource, TOrthogonal >
```

```
+ waypointIndex
```
