

```
boost::statechart::  
event< MoveGroupMotionExecution  
Succeeded< TSource, TObjectTag > >
```

The diagram illustrates an inheritance relationship between two C++ event types. The base class, `boost::statechart::event< MoveGroupMotionExecutionSucceeded< TSource, TObjectTag > >`, is shown in a white box at the top. The derived class, `moveit_z_client::MoveGroupMotionExecutionSucceeded< TSource, TObjectTag >`, is shown in a gray box at the bottom. A blue arrow with an open triangular head points from the derived class to the base class, indicating that the derived class inherits from the base class.

```
moveit_z_client::MoveGroup  
MotionExecutionSucceeded  
< TSource, TObjectTag >
```
