

```
boost::statechart::  
event< EvWaypoint100  
< TSource, TObjectTag > >
```

A UML class diagram showing inheritance. A blue arrow with an open triangular head points from the class `cl_move_base_z::EvWaypoint100` to the class `boost::statechart::event< EvWaypoint100 < TSource, TObjectTag > >`. The base class is represented by a white box with three horizontal compartments. The derived class is represented by a grey box with three horizontal compartments. The first compartment of the derived class contains the class name and template arguments. The second compartment contains a public attribute `+ waypointIndex`. The third compartment is empty.

```
cl_move_base_z::EvWaypoint100  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
