

```
boost::statechart::  
event< EvWaypoint118  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined as `boost::statechart::event< EvWaypoint118 < TSource, TObjectTag > >` and is represented by a white box with two empty horizontal compartments below the definition. The derived class is defined as `cl_move_base_z::EvWaypoint118 < TSource, TObjectTag >` and includes a public attribute `+ waypointIndex`. It is represented by a grey box with three horizontal compartments. A blue arrow with an open triangular head points from the derived class box to the base class box, indicating inheritance.

```
cl_move_base_z::EvWaypoint118  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
