

boost::statechart::  
event< EvWaypoint62  
< TSource, TObjectTag > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint62< TSource, TObjectTag > >"]
    class Derived["cl_move_base_z::EvWaypoint62< TSource, TObjectTag >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. The base class, `boost::statechart::event< EvWaypoint62< TSource, TObjectTag > >`, is represented by a white box with a black border. The derived class, `cl_move_base_z::EvWaypoint62< TSource, TObjectTag >`, is represented by a gray box with a black border. A blue arrow with an open triangular head points from the derived class to the base class, indicating that the derived class inherits from the base class. The derived class box contains two sections: the top section shows the class name and template parameters, and the bottom section shows a public attribute `+ waypointIndex`.

cl\_move\_base\_z::EvWaypoint62  
< TSource, TObjectTag >

+ waypointIndex
