

boost::statechart::
event< EvWaypoint179
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint179< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint179["cl_move_base_z::EvWaypoint179< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint179 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the base class `boost::statechart::event< EvWaypoint179 < TSource, TOrthogonal > >`. A dark gray box at the bottom represents the derived class `cl_move_base_z::EvWaypoint179 < TSource, TOrthogonal >`. A blue arrow with an open triangular head points from the derived class box up to the base class box. The derived class box is divided into three horizontal sections: the top section contains the class name, the middle section contains the public attribute `+ waypointIndex`, and the bottom section is empty.

cl_move_base_z::EvWaypoint179
< TSource, TOrthogonal >

+ waypointIndex
