The diagram shows a base class at the top and a derived class at the bottom. The base class is defined with the namespace `boost::statechart::` and the event type `event< EvWaypoint214 < TSource, TOrthogonal > >`. The derived class is `cl_move_base_z::EvWaypoint214 < TSource, TOrthogonal >` and includes a public attribute `+ waypointIndex`. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance.
