

```
boost::statechart::  
event< EvWaypoint100  
< TSource, TOrthogonal > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined by a box with three compartments: the top one contains the text 'boost::statechart::event< EvWaypoint100 < TSource, TOrthogonal > >', and the two bottom compartments are empty. The derived class is defined by a box with three compartments: the top one contains 'cl\_move\_base\_z::EvWaypoint100 < TSource, TOrthogonal >', the middle one contains '+ waypointIndex', and the bottom one is empty. A blue arrow with an open triangular head points from the top compartment of the derived class box to the bottom edge of the base class box, indicating inheritance.

```
cl_move_base_z::EvWaypoint100  
  < TSource, TOrthogonal >
```

```
+ waypointIndex
```
