

```
boost::statechart::  
event< EvWaypoint150  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined with the namespace boost::statechart and the event type EvWaypoint150, with template parameters TSource and TObjectTag. The derived class is defined in the namespace cl_move_base_z and also inherits from EvWaypoint150 with the same template parameters. The derived class has a public attribute named waypointIndex.

```
cl_move_base_z::EvWaypoint150  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
