

```
boost::statechart::  
event< EvWaypoint183  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined by a light gray box with three horizontal sections. The top section contains the text 'boost::statechart::event< EvWaypoint183 < TSource, TObjectTag > >'. The middle and bottom sections are empty. The derived class is defined by a darker gray box with three horizontal sections. The top section contains 'cl_move_base_z::EvWaypoint183 < TSource, TObjectTag >', the middle section contains '+ waypointIndex', and the bottom section is empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

```
cl_move_base_z::EvWaypoint183  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
