The diagram shows a UML class hierarchy. The base class, located at the top, is `boost::statechart::event< EvWaypoint206< TSource, TOrthogonal > >`. It has a rectangular box with three horizontal compartments. The top compartment contains the class name, while the middle and bottom compartments are empty. The derived class, located at the bottom, is `cl_move_base_z::EvWaypoint206< TSource, TOrthogonal >`. It has a rectangular box with three horizontal compartments. The top compartment contains the class name, the middle compartment contains the public attribute `+ waypointIndex`, and the bottom compartment is empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.
