

```
boost::statechart::  
event< EventC< TSource,  
    TObjectTag > >
```

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EventC< TSource, TObjectTag > >"]
    class smacc_state_reactors_event["smacc::state_reactors::EventC< TSource, TObjectTag >"]
    smacc_state_reactors_event --|> boost_statechart_event
```

The diagram shows a class hierarchy. The base class is `boost::statechart::event< EventC< TSource, TObjectTag > >`, represented by a white box with a thin grey border. It has two empty rectangular slots below its name. The derived class is `smacc::state_reactors::EventC< TSource, TObjectTag >`, represented by a grey box with a thick black border. It also has two empty rectangular slots below its name. A blue arrow points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

```
smacc::state_reactors  
::EventC< TSource, TObjectTag >
```
