

boost::statechart::  
event< EvWaypoint236  
< TSource, TOrthogonal > >

```
classDiagram
    class BaseEvent["boost::statechart::event< EvWaypoint236< TSource, TOrthogonal > >"]
    class DerivedEvent["cl_move_base_z::EvWaypoint236< TSource, TOrthogonal >"]
    DerivedEvent --|> BaseEvent
```

The diagram illustrates a generalization relationship between two event types. The base event is `boost::statechart::event< EvWaypoint236< TSource, TOrthogonal > >`, represented in a white box. The derived event is `cl_move_base_z::EvWaypoint236< TSource, TOrthogonal >`, represented in a grey box. A blue arrow with an open triangular head points from the derived event to the base event, indicating that the derived event inherits from or specializes the base event. The derived event box also includes a public attribute `+ waypointIndex`.

cl\_move\_base\_z::EvWaypoint236  
< TSource, TOrthogonal >

+ waypointIndex
