The diagram shows a class hierarchy. The base class is `boost::statechart::event< EvWaypoint152 < TSource, TOrthogonal > >`, represented in a white box. The derived class is `cl_move_base_z::EvWaypoint152 < TSource, TOrthogonal >`, represented in a grey box. A blue arrow with an open triangular head points from the derived class to the base class, indicating inheritance. The derived class box has three sections: the top section contains the class name, the middle section contains the public attribute `+ waypointIndex`, and the bottom section is empty.
