

```
boost::statechart::  
event< EvWaypoint244  
< TSource, TObjectTag > >
```

The diagram illustrates an inheritance relationship. A blue arrow points from the bottom class to the top class. The top class is a template event type from the boost::statechart library. The bottom class is a user-defined event type that inherits from the base event type. The bottom class has a public member variable named waypointIndex.

```
cl_move_base_z::EvWaypoint244  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
