

boost::statechart::
event< EvWaypoint110
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint110< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint110< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. The base class, `boost::statechart::event< EvWaypoint110 < TSource, TOrthogonal > >`, is shown in a white box with a grey border. The derived class, `cl_move_base_z::EvWaypoint110 < TSource, TOrthogonal >`, is shown in a grey box with a black border. A blue arrow with a hollow triangular head points from the derived class to the base class, indicating that the derived class inherits from the base class. The derived class has an additional attribute, `+ waypointIndex`, which is not present in the base class.

cl_move_base_z::EvWaypoint110
< TSource, TOrthogonal >

+ waypointIndex
