

boost::statechart::
event< EvWaypoint95
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint95< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint95["cl_move_base_z::EvWaypoint95< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint95 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. A base class, `boost::statechart::event< EvWaypoint95 < TSource, TOrthogonal > >`, is shown in a white box with a thin black border. It has two empty compartments below the header. A derived class, `cl_move_base_z::EvWaypoint95 < TSource, TOrthogonal >`, is shown in a gray box with a thick black border. It has a header with the class name and two compartments below it, the first of which contains the attribute `+ waypointIndex`. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance.

cl_move_base_z::EvWaypoint95
< TSource, TOrthogonal >

+ waypointIndex
