

```
boost::statechart::  
event< EvWaypoint60  
< TSource, TObjectTag > >
```

The diagram shows two class boxes. The top box is for `boost::statechart::event< EvWaypoint60 < TSource, TObjectTag > >` and the bottom box is for `move_base_z_client::EvWaypoint60< TSource, TObjectTag >`. A blue arrow with an open triangle head points from the bottom box to the top box, indicating that the bottom class inherits from the top class.

```
move_base_z_client  
::EvWaypoint60< TSource,  
TObjectTag >
```

```
+ waypointIndex
```
