

boost::statechart::
event< EvWaypoint170
< TSource, TObjectTag > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint170< TSource, TObjectTag > >"]
    class Derived["cl_move_base_z::EvWaypoint170< TSource, TObjectTag >"]
    Derived --|> Base
```

The diagram shows a base class box at the top and a derived class box at the bottom. The base class box is divided into three horizontal sections: the top section contains the text 'boost::statechart::event< EvWaypoint170< TSource, TObjectTag > >', and the two bottom sections are empty. The derived class box is divided into three horizontal sections: the top section contains the text 'cl_move_base_z::EvWaypoint170< TSource, TObjectTag >', the middle section contains the text '+ waypointIndex', and the bottom section is empty. A blue arrow with an open triangle head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint170
< TSource, TObjectTag >

+ waypointIndex
