

```
boost::statechart::  
event< EvWaypoint244  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is represented by a rectangle with three horizontal compartments. The top compartment contains the text 'boost::statechart::event< EvWaypoint244 < TSource, TObjectTag > >'. The other two compartments are empty. The derived class is represented by a rectangle with three horizontal compartments. The top compartment contains the text 'cl\_move\_base\_z::EvWaypoint244 < TSource, TObjectTag >'. The middle compartment contains the text '+ waypointIndex'. The bottom compartment is empty. A blue arrow points from the top of the derived class rectangle to the bottom of the base class rectangle, indicating inheritance.

```
cl_move_base_z::EvWaypoint244  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
