

```
boost::statechart::  
event< EvWaypoint232  
< TSource, TOrthogonal > >
```

A UML class diagram showing inheritance. A blue arrow with an open triangular head points from the class `cl_move_base_z::EvWaypoint232` to the class `boost::statechart::event< EvWaypoint232 < TSource, TOrthogonal > >`. The target class is a base class with two empty compartments. The source class is a derived class with three compartments: the first contains the class name and template parameters, the second contains a public attribute `+ waypointIndex`, and the third is empty.

```
cl_move_base_z::EvWaypoint232  
  < TSource, TOrthogonal >
```

```
+ waypointIndex
```
