

boost::statechart::  
event< EvWaypoint111  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint111< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint111< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. A base class box at the top contains the text 'boost::statechart::event< EvWaypoint111 < TSource, TOrthogonal > >'. It is divided into three horizontal compartments, with the text in the top one and the others empty. Below it is a derived class box with a black border and a light gray fill. The derived class box is divided into three horizontal compartments. The top compartment contains 'cl\_move\_base\_z::EvWaypoint111 < TSource, TOrthogonal >'. The middle compartment contains '+ waypointIndex'. The bottom compartment is empty. A blue arrow with a hollow triangular head points from the top center of the derived class box to the bottom center of the base class box.

cl\_move\_base\_z::EvWaypoint111  
< TSource, TOrthogonal >

+ waypointIndex
