

```
boost::statechart::  
event< EvWaypoint165  
< TSource, TOrthogonal > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined by a box with three sections: the top section contains the text 'boost::statechart::event< EvWaypoint165 < TSource, TOrthogonal > >', the middle section is empty, and the bottom section is empty. The derived class is defined by a box with three sections: the top section contains 'cl_move_base_z::EvWaypoint165 < TSource, TOrthogonal >', the middle section contains '+ waypointIndex', and the bottom section is empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

```
cl_move_base_z::EvWaypoint165  
  < TSource, TOrthogonal >
```

```
+ waypointIndex
```
