

boost::statechart::
event< EvWaypoint220
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint220< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint220["cl_move_base_z::EvWaypoint220< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint220 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class: `boost::statechart::event< EvWaypoint220 < TSource, TOrthogonal > >`. It has two empty compartments below the name. At the bottom is a grey box representing the derived class: `cl_move_base_z::EvWaypoint220 < TSource, TOrthogonal >`. It has two compartments: the top one contains `+ waypointIndex`, and the bottom one is empty. A blue arrow with a hollow triangular head points from the top of the grey box to the bottom of the white box, indicating that the grey class inherits from the white class.

cl_move_base_z::EvWaypoint220
< TSource, TOrthogonal >

+ waypointIndex
