

boost::statechart::  
event< EvWaypoint117  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint117< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint117["cl_move_base_z::EvWaypoint117< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint117 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. At the top is a base class box for `boost::statechart::event< EvWaypoint117 < TSource, TOrthogonal > >`. Below it is a derived class box for `cl_move_base_z::EvWaypoint117 < TSource, TOrthogonal >`. A blue arrow with an open triangular head points from the derived class to the base class. The derived class box has three sections: the top section contains the class name, the middle section contains the public attribute `+ waypointIndex`, and the bottom section is empty.

cl\_move\_base\_z::EvWaypoint117  
< TSource, TOrthogonal >

+ waypointIndex
