

boost::statechart::  
event< EvWaypoint253  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint253< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint253< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class `boost::statechart::event< EvWaypoint253 < TSource, TOrthogonal > >`. It has two empty rectangular compartments below the class name. At the bottom is a grey box representing the derived class `cl_move_base_z::EvWaypoint253 < TSource, TOrthogonal >`. It has three compartments: the top one contains the class name, the middle one contains the public attribute `+ waypointIndex`, and the bottom one is empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

cl\_move\_base\_z::EvWaypoint253  
< TSource, TOrthogonal >

+ waypointIndex
