

```
boost::statechart::  
event< EvWaypoint105  
< TSource, TOrthogonal > >
```

The diagram shows a class hierarchy. At the top is the base class `boost::statechart::event< EvWaypoint105 < TSource, TOrthogonal > >`. Below it is the derived class `cl_move_base_z::EvWaypoint105 < TSource, TOrthogonal >`. A blue arrow with an open triangular head points from the derived class to the base class, indicating inheritance. The derived class has a public attribute `+ waypointIndex`.

```
cl_move_base_z::EvWaypoint105  
  < TSource, TOrthogonal >
```

```
+ waypointIndex
```
