

boost::statechart::  
event< EvWaypoint237  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint237< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint237["cl_move_base_z::EvWaypoint237< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint237 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. A base class, `boost::statechart::event< EvWaypoint237 < TSource, TOrthogonal > >`, is shown in a white box at the top. It has two empty compartments below its name. A derived class, `cl_move_base_z::EvWaypoint237 < TSource, TOrthogonal >`, is shown in a grey box at the bottom. It has two compartments: the top one contains the public member `+ waypointIndex`, and the bottom one is empty. A blue arrow with an open triangular head points from the derived class to the base class, indicating inheritance.

cl\_move\_base\_z::EvWaypoint237  
< TSource, TOrthogonal >

+ waypointIndex
