

```
boost::statechart::  
event< EvTopicMessageTimeout  
      < TSource, TObjectTag > >
```

The diagram shows a class hierarchy. The base class, `boost::statechart::event< EvTopicMessageTimeout < TSource, TObjectTag > >`, is represented by a white box with a black border. It has two empty compartments below the header. The derived class, `multirole_sensor_client::EvTopicMessageTimeout < TSource, TObjectTag >`, is represented by a gray box with a black border. It has a header compartment, a compartment containing the attribute `+ timerData`, and an empty bottom compartment. A blue arrow with a hollow triangular head points from the derived class to the base class, indicating inheritance.

```
multirole_sensor_client  
::EvTopicMessageTimeout  
  < TSource, TObjectTag >
```

```
+ timerData
```
