

boost::statechart::
event< EvWaypoint221
< TSource, TObjectTag > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint221< TSource, TObjectTag > >"]
    class Derived["cl_move_base_z::EvWaypoint221< TSource, TObjectTag >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class: boost::statechart::event< EvWaypoint221 < TSource, TObjectTag > >. Below it is a grey box representing the derived class: cl_move_base_z::EvWaypoint221 < TSource, TObjectTag >. A blue arrow with an open triangular head points from the derived class box up to the base class box. The derived class box has two additional sections: the middle section contains the attribute + waypointIndex, and the bottom section is empty.

cl_move_base_z::EvWaypoint221
< TSource, TObjectTag >

+ waypointIndex
