

boost::statechart::  
event< EvWaypoint138  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint138< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint138["cl_move_base_z::EvWaypoint138< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint138 --|> boost_statechart_event
```

The diagram shows a class hierarchy. The base class, `boost::statechart::event< EvWaypoint138 < TSource, TOrthogonal > >`, is represented by a white box with a thin grey border. It has two empty rectangular compartments below its header. The derived class, `cl_move_base_z::EvWaypoint138 < TSource, TOrthogonal >`, is represented by a grey box with a thick black border. It has a header compartment, a compartment containing the public attribute `+ waypointIndex`, and an empty bottom compartment. A blue arrow with a hollow triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

cl\_move\_base\_z::EvWaypoint138  
< TSource, TOrthogonal >

+ waypointIndex
