

boost::statechart::
event< EvWaypoint192
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint192< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint192["cl_move_base_z::EvWaypoint192< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint192 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. A blue arrow with an open triangular head points from the bottom class to the top class. The top class is a template event type from the boost::statechart library. The bottom class is a user-defined event type that inherits from the base event type.

cl_move_base_z::EvWaypoint192
< TSource, TOrthogonal >

+ waypointIndex
