

boost::statechart::
event< EvWaypoint171
< TSource, TObjectTag > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint171< TSource, TObjectTag > >"]
    class Derived["cl_move_base_z::EvWaypoint171< TSource, TObjectTag >"]
    Base <|-- Derived
```

The diagram illustrates an inheritance relationship. A base class box at the top contains the text 'boost::statechart::event< EvWaypoint171 < TSource, TObjectTag > >'. A blue arrow with an open triangular head points from a derived class box below to the base class box. The derived class box is shaded gray and contains three sections: the first with 'cl_move_base_z::EvWaypoint171 < TSource, TObjectTag >', the second with '+ waypointIndex', and the third is empty.

cl_move_base_z::EvWaypoint171
< TSource, TObjectTag >

+ waypointIndex
