

```
boost::statechart::  
event< EvWaypoint203  
< TSource, TObjectTag > >
```

A UML class diagram showing inheritance. The base class, `boost::statechart::event< EvWaypoint203 < TSource, TObjectTag > >`, is represented by a white box with a thin grey border. It has two empty rectangular compartments below the header. The derived class, `cl_move_base_z::EvWaypoint203 < TSource, TObjectTag >`, is represented by a grey box with a thick black border. It has a header with the class name and two compartments below it: the first contains `+ waypointIndex` and the second is empty. A blue arrow with a hollow triangular head points from the derived class to the base class, indicating inheritance.

```
cl_move_base_z::EvWaypoint203  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
