

boost::statechart::
event< EvWaypoint231
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint231< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint231["cl_move_base_z::EvWaypoint231< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint231 --|> boost_statechart_event
```

The diagram shows a class hierarchy. The base class, `boost::statechart::event< EvWaypoint231 < TSource, TOrthogonal > >`, is represented by a white box with a thin black border. It has two empty rectangular compartments below its name. The derived class, `cl_move_base_z::EvWaypoint231 < TSource, TOrthogonal >`, is represented by a grey box with a thick black border. It has a top compartment with its name, a middle compartment containing the attribute `+ waypointIndex`, and a bottom compartment. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint231
< TSource, TOrthogonal >

+ waypointIndex
