

```
boost::statechart::  
event< EvKeyPressT<  
    TSource, TObjectTag > >
```

The diagram illustrates an inheritance relationship between two C++ classes. The base class, `boost::statechart::event< EvKeyPressT< TSource, TObjectTag > >`, is shown in a white box with a thin gray border. It has two empty rectangular compartments below the name. The derived class, `keyboard_client::EvKeyPressT< TSource, TObjectTag >`, is shown in a gray box with a thick black border and also has two empty rectangular compartments below its name. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating that `keyboard_client::EvKeyPress` inherits from `boost::statechart::event`.

```
keyboard_client::EvKeyPress  
T< TSource, TObjectTag >
```
