

boost::statechart::
event< EvWaypoint219
< TSource, TOrthogonal > >

```
classDiagram
    class BaseEvent["boost::statechart::event< EvWaypoint219< TSource, TOrthogonal > >"]
    class DerivedEvent["cl_move_base_z::EvWaypoint219< TSource, TOrthogonal >"]
    DerivedEvent --|> BaseEvent
```

The diagram illustrates a generalization relationship between two event types. The base event type, located in the top box, is `boost::statechart::event< EvWaypoint219< TSource, TOrthogonal > >`. The derived event type, located in the bottom box, is `cl_move_base_z::EvWaypoint219< TSource, TOrthogonal >`. A blue arrow with an open triangular head points from the derived event type to the base event type, indicating that the derived event is a specialization of the base event. The derived event box also lists a public attribute `+ waypointIndex`.

cl_move_base_z::EvWaypoint219
< TSource, TOrthogonal >

+ waypointIndex
