

boost::statechart::
event< EvWaypoint93
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint93< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint93["cl_move_base_z::EvWaypoint93< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint93 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. A base class, `boost::statechart::event< EvWaypoint93 < TSource, TOrthogonal > >`, is shown in a white box with a thin border. It has two empty compartments below the header. A derived class, `cl_move_base_z::EvWaypoint93 < TSource, TOrthogonal >`, is shown in a gray box with a thick border. It has a header with the class name and two compartments below it: the first contains `+ waypointIndex` and the second is empty. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance.

cl_move_base_z::EvWaypoint93
< TSource, TOrthogonal >

+ waypointIndex
