

```
boost::statechart::  
event< EvWaypoint215  
< TSource, TObjectTag > >
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined with the namespace boost::statechart and the event type EvWaypoint215, which is a template over TSource and TObjectTag. The derived class is defined in the namespace cl_move_base_z and also inherits from EvWaypoint215, which is the same template type. The derived class has a public attribute named waypointIndex.

```
cl_move_base_z::EvWaypoint215  
  < TSource, TObjectTag >
```

```
+ waypointIndex
```
