The diagram shows a base class at the top and a derived class at the bottom. The base class is defined with the namespace `boost::statechart::` and the event type `EvWaypoint229`. The derived class is defined with the namespace `cl_move_base_z::` and the same event type. The derived class has a public attribute `waypointIndex`. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance.
