

boost::statechart::  
event< EvWaypoint243  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint243< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint243["cl_move_base_z::EvWaypoint243< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint243 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. A base class box at the top contains the text 'boost::statechart::event< EvWaypoint243 < TSource, TOrthogonal > >'. It has two empty compartments below the text. A derived class box at the bottom, shaded gray, contains 'cl\_move\_base\_z::EvWaypoint243 < TSource, TOrthogonal >' in its top compartment, '+ waypointIndex' in its middle compartment, and is empty in its bottom compartment. A blue arrow with an open triangular head points from the top of the derived class box to the base class box.

cl\_move\_base\_z::EvWaypoint243  
< TSource, TOrthogonal >

+ waypointIndex
